

Activity: MongoDB - Importing and exporting data

1. Create a new database called `meanhotel` to use for the hotels application.
2. Use `mongoimport` to import the `hotel-data.json` file* to a collection called `hotels` .
3. Validate through the Mongo shell that the database has been created, and data imported

* You can find this file attached to the lesson on Udemy or in the source code on [GitHub](#)
